

Once you share this information (even in rough notes or screenshots), I will:

- Analyze it.
- Build a **structured AI Agent User Guide** specifically for BloomifAI, including:
 - How the AI should interpret user questions.
 - Word-for-word response templates for:
 - Adding a KPI
 - Adding a channel
 - Editing/removing KPIs and channels
 - Other key workflows you specify
 - Decision trees for handling ambiguous or incomplete questions.
 - Guidance on asking clarifying questions.
 - How to handle errors, limitations, and “I don’t know” cases.

If it’s easier, you can start by answering just these three, and we’ll iterate:

1. Describe BloomifAI in 3–5 sentences.
2. Provide the exact steps (as you’d write in a help article) for:
 - Adding a KPI
 - Adding a channel
3. List 5–10 common questions users ask about BloomifAI.

I’ll then draft the first version of the training document and refine it with you.
